

probably experience fewer seismic movements.

Results from this interesting study were published in renowned scientific journals like the Journal of Geophysical Research or Tectonics. The research group in which researchers Fernández and Soto participate is a member of Topo-Iberia, an important project which aims at creating an unprecedented temporal seismic broadband net in Spain, composed by a minimum of 80 seismic stations 50-60 km apart and which will have simultaneous and homogenous coverage in different regions. Furthermore, Topo-Ibseria will create the biggest Spanish GPS net ever created.-Universidad de Granada
