

## Are you interested in epigenetics, cancer, or aging?

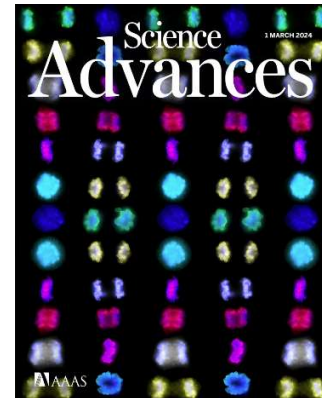

*We offer pre- and post-doctoral positions to join our lab during 2024.*

**Who are we?** The “Epigenetics in Stem Cells and Cancer” lab at the Centre for Genomics and Oncological Research (GENYO) belongs to the Department of Biochemistry and Molecular Biology II of the University of Granada located in Granada, Spain. We use molecular and cellular biology approaches together with epigenomics and bioinformatics analyses to study how epigenetic processes regulate stem cell biology, cancer and aging in mice and humans.

**What are we seeking for?** Motivated researchers with a good track record in biomedical degrees and/or research.

**What do we offer?** A vibrant and friendly environment to carry out outstanding research in epigenomics. We offer three-year contracts and a competitive salary depending on experience. Incorporation to the research group as soon as possible.

**Do you need more information?** Please, check our webpage [www.landeiralab.ugr.es](http://www.landeiralab.ugr.es) and/or our recent review about epigenetic memory (Espinosa-Martínez et al., Science Advances 2024).

**What do you need to do?** Send a motivation letter, your CV, and the details of three referees by email to David Landeira ([davidlandeira@genyo.es](mailto:davidlandeira@genyo.es)).
